SUMMARY

Started in code, moved toward strategy when I realized the most interesting problems sit at the intersection of what is technically possible and what is worth building. Three years in a Fortune 200 and two consulting engagements sharpened one instinct above all else: find the real problem before proposing a fix. At Trane now, applying the same instinct to sustainability strategy. Pursuing MEM (4.0) at Purdue.

WORK EXPERIENCE

Sustainability Strategy Intern

Trane Technologies

May 2026 – Present

Davidson, NC

- Analyzing sustainability engagement requirements across hyperscaler clients including Amazon, Google, and Meta to map decarbonization expectations and inform Trane's broader net-zero strategy across building systems and energy solutions.
- Scoping and leading delivery of a supplier sustainability analytics platform enabling procurement managers to model emissions outcomes, regulatory compliance trajectories, and cost glide paths across hybrid sourcing scenarios to support data-driven decisions.

GTM Strategy Consultant

Bayer - LoriComunica

Jan 2026 – May 2026

West Lafayette, IN

- Diagnosed a conversion failure from 4,652 downloads to 1 paying subscriber and traced root cause to post-install friction and trial design rather than acquisition; structured finding changed the intervention from a marketing fix to a product fix.
- Scored 11 competitors across 10 dimensions, isolated 3 capability gaps blocking US market entry, and recommended a 4-tier pricing architecture anchored against \$299 US market leaders.
- Validated the Shareable Context Card as the highest-leverage growth lever with 73% upgrade intent in prototype testing and built a GTM roadmap projecting \$5K MRR within 12 months through SLP clinic partnerships; delivered structured recommendation directly to founders.

AI Strategy Consultant

ISE Italy

Jan 2026 – May 2026

West Lafayette, IN

- Identified fault classification and automated reporting as the critical diagnostic gap in the client's production line; scoped and validated a solution achieving 90.3% accuracy that compresses per-inspection time from 5 hours to 15 minutes.
- Built the business case for \$76K annual savings, flagged loosening detection as the key risk before scale, and structured a phased rollout roadmap with competitive positioning for production deployment; presented findings directly to the CEO.

Technical Project Manager

Carrier

Apr 2025 – Dec 2025

Hyderabad, India

- Built Carrier's first integrated scenario modeling platform translating live regulatory, financial, and operational data into C-suite decision support across 12 revenue and emissions scenarios for a \$20B global portfolio, preventing \$770K in outsourcing spend and driving 12x evaluation throughput.
- Coordinated end-to-end program delivery across 9 cross-functional teams, owning the master schedule, aligning milestones across engineering, finance, and regulatory workstreams, and driving on-time delivery.
- Award:** Youngest recipient of Carrier Leadership Award (Top 1%) for excellence in product delivery.

Product Engineer

Carrier

Aug 2024 – Mar 2025

Hyderabad, India

- Mapped regulatory reporting workflows, identified 4 critical bottlenecks, and built the Product Data Management Tool compressing SBTi-aligned compliance reporting from 11 weeks to 4 weeks.

Management Trainee

Carrier

Aug 2022 – Jul 2024

Hyderabad, India

- ML-Based Home Energy Management System:** Engineered load forecasting models with occupancy pattern encoding and weather signal ingestion, achieving 11% accuracy gain through iterative retraining and A/B evaluation; scaled from 50-device pilot to 9,000.
- Data Center Operations Analytics:** Built a Python ETL pipeline across Cisco enterprise data centers monitoring real-time power draw and cooling load; implemented statistical anomaly detection and threshold-based alerting adopted by operations within 60 days, surfacing \$1.8M in at-risk assets and identifying a 10% energy efficiency pathway.

PROJECTS

- Lodge | 1st Place, MEMPC Hackathon Finals 2026:** Social infrastructure app that matches users on repeated behavioral proximity and shared daily routines rather than stated interests, targeting the isolation gap for people newly relocated to a city; built a full-stack MVP with a real-time matching engine, geo-heatmap, and social health score in 24 hours. [Lodge \(hypothesis\)](#)
- Claro | Johns Hopkins Product Hackathon 2026:** AI learning platform that maps concept dependencies across a student's coursework, replacing keyword search with relationship-driven discovery; gives professors real-time visibility into where understanding breaks down across their cohort. [Claro](#)

EDUCATION

Purdue University - Master of Engineering Management (Tech MBA), GPA: 4.0

West Lafayette, IN | Jan 2026 – Dec 2027

JNTU Hyderabad - Bachelor of Technology, Computer Science, GPA: 3.9

Hyderabad, India | Jul 2018 – Jul 2022

SKILLS AND CERTIFICATIONS

Product Management: 0 to 1 Product Development, User Research, PRD/BRD, Roadmap Prioritization, Feature Prioritization, Go to Market Strategy, A/B Testing, Product Analytics, Backlog Management, Stakeholder Management, Competitive Analysis, KPI Development

Technical: Python, SQL, REST APIs, GenAI, LLMs, Agentic AI, AWS, PowerBI, Tableau, Figma, Jira, Confluence, Git, Snowflake, Docker

Domain: B2B SaaS, IoT, Data Products, Sustainability and Carbon Accounting, Corporate Consulting, Energy Management, AI, Agile

Certifications: Certified Scrum Product Owner (CSPO), McKinsey Forward Program, AI for Agile Professionals

Publication: Air and Sound Pollution Tracking Using IoT and Machine Learning, Taylor & Francis, 2024
